ServiceNow CSA Certification Roadmap

A practical starting point for building administrator skills and preparing for the Certified System Administrator exam.

Start with the official blueprint. Certification requirements, training, fees and exam details can change. Check ServiceNow University for the current information before registering.

Your learning path

1. ### Understand the platform

   Learn navigation, applications, modules, lists, forms and the purpose of tables and records.

2. ### Build administration foundations

   Practise users, groups, roles, data, forms, notifications and basic access controls.

3. ### Work with services and automation

   Explore the service catalog, knowledge, Flow Designer and common IT service workflows.

4. ### Review and prepare

   Use the current official exam blueprint to identify gaps, revisit training and practise in an instance.

Learn by doing

Work in a personal developer instance where available. Use sample data and never enter real confidential information.

> **Suggested approach:** Learn a concept, try it yourself, explain what happened, and revisit the relevant official documentation.

Platform and data

- Navigate an application; filter a list and personalise a form.
- Inspect a table, its fields and relationships; create a sample record.
- Explore import sets and transform maps with sample data.

Users and security

- Create test users and groups; explore role assignments.
- Learn how access controls protect records and fields; test with an appropriate non-admin account.

Self-service and workflows

- Explore incidents, requests and knowledge articles.
- Create a simple catalog item with variables in your practice instance.
- Build and test a basic flow; explore notifications and approvals.

Configuration and maintenance

- Compare UI policies and business rules; explore update sets and when to use them.
- Review basic reporting, CMDB concepts and platform security in the official documentation.

Prepare with confidence

1. ## Check the latest blueprint

   Review the current exam objectives and requirements. Use it as your checklist rather than relying on old exam summaries.

2. ## Complete relevant official learning

   ServiceNow lists Welcome to ServiceNow and ServiceNow Administration Fundamentals as recommended preparation. Check the latest requirements in ServiceNow University.

3. ## Practise and review

   Revisit weak topics using official training and product documentation. Validate your understanding with hands-on practice rather than memorising answers.

4. ## Verify registration details

   Confirm current eligibility, any required training or voucher, pricing, exam delivery and maintenance rules directly with ServiceNow before booking.
